

► **Store Fixturing: Counters "Radiused"**

Radiused Sales Counter

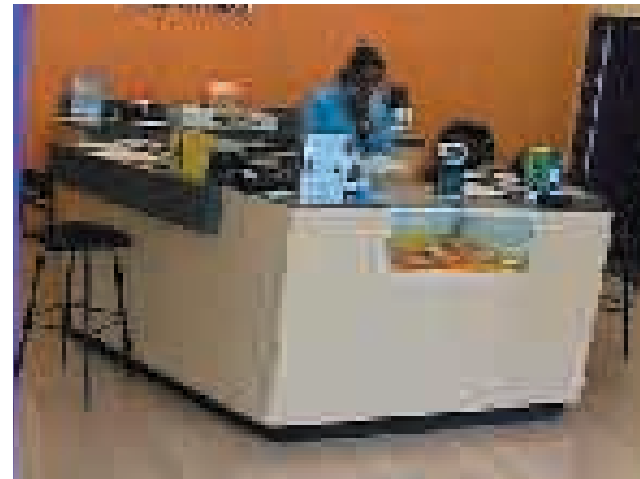

Handsome, durable and functional are a few words to describe our "Three Sectional Service" counters. These commercial grade counters are manufactured to address the need for customer interaction, product display and sales transaction all within a limited space. The 45° or 90° middle section along with the 48" or 72" wide POS stations are designed to create a spacious area whereby one or more sales persons can handle a variety of transactions simultaneously. The angle or curved middle counter creates a continuous counter surface between the POS counters and gently angles them to decrease the "footprint" area. Each center section is constructed with the finest commercial grade materials, including heavy duty drawer glides, printer shelf guides and monitor cradles. All our features are designed to provide years of use, even in the "busiest retail environment". Each counter ensemble consists of three sections; two point of sale counters and one product display counter. POS counters are available in 48" and 72" wide formats that seamlessly integrate with the middle counter. The middle counter is constructed in full 42" height and is available in a solid top or showcase top. All counter sections are compatible with wire access "doors" located in each base and wire" openings in divider panels.

Installation is simple, all sections have been previously setup and rigorously inspected for a quality fit.

To install, simply place the middle section in the area of use and then position each POS, level and screw together. All installation material is provided to insure a quick and easy installation.
